Simply put, "Lyme Disease" was commercialized
to the detriment of the Public, by the entities I will

U.S. AAG Thompson

list + describe. It's not all that complex a picture; the owners of the vaccine patents simply "spun" the definition of this neurologic disease, into an arthritis. The result was extensive harm, to those infected. in multiple domains.

CITIZEN'S COMPLAINT -continued-

Your Name: Kathleen M. Dickson

explained on my website, with links under "AntiTrust" - see the navigation bar. <http://www.actionlyme.com>

You will miss the entire point of this case if you don't understand the bloodwork, initially. How the bloodwork changes, is central.

The spirochetes, the bacteria, are Borrelia, and all Borrelia are Relapsing Infections. That is, they, in a very general sense, shed their coat, and put on a new one, and so are not killed by the antibodies people make against them. The vaccine, is one of the elements of the coat - outer surface protein "A" (Osp-A). It is "SPECIFIC" to Borrelia burgdorferi, strain B31. That means...there is only about a 5% chance some other organism makes this lipoprotein; OspA is about 95% "SPECIFIC" to "Lyme Disease" spirochete B31.

- In 1986, it was published by Yale/^{patent owner} Allen Steere, that the Lyme Disease spirochete behaved like the other Borrelia; these are relapsing organisms.
- In 1986, it was published by Alan Barbour^{patent owner} (UTexas) that the Lyme Disease spirochete was similar to the Relapsing Fever Borrelia, and did the same thing; switch outer membrane components.

- They both said, this is a disease of the central nervous system (brain & spinal cord).

→ Then, both, as former CDC officers essentially said, No, this disease only exists in the form of the arthritis.

And the bloodwork has to look like, on page 3, here, the Arthritis Western blot, on the right. It was the only way they could "qualify" their vaccines, = FRAUD.

The rest of us. (center lanes only)

People who are prone to an arthritis response - only represent about 15% of the population

Neuroborreliosis Stage II

Arthritis & Acrodermatitis

IgM will change over time, or just express as flagellin (41 kD)

The darkness equals concentration of antibodies in the blood.

Fig. 4.: Whole-Cell-Lysate-Immunoblot
Sera: +, Reference serum (IgG); 1 - 7, patient sera
Antigen: *B. burgdorferi* (PKo strain)

All of this used to be Lyme Borreliosis or Lyme disease.

Once the patented OspA product, the vaccine, was underway, "Lyme Disease" became only the arthritis. The people with neuroborreliosis were then told they were just plain nuts, when, in fact, borreliosis is a disease of the brain.
